GitHub | Fiverr | LinkedIn

PROFILE

B. Tech CSE (AI & ML) student with hands-on commercial software development experience through paid client projects since 2021. Experienced across C++, Java, Python, C, C#, and JavaScript, with a focus on systems programming, graphics, networking, and independent end-to-end development. Combines academic foundations with practical experience gathering requirements, building software, shipping releases, and working directly with international clients.

EDUCATION

B. Tech, Computer Science & Engineering (AI & ML) | Techno Main Salt Lake | 2024 – 2028 | CGPA: 8.195 / 10

EXPERIENCE

Freelance Software Developer — Fiverr | 2021 – Present

- Delivered **paid software projects** for international clients, maintaining a 100% 5-star record and earning repeat business.
- Worked directly with clients from requirements and prototyping through implementation, testing, deployment, revisions, and post-delivery support.
- Maintained a long-term client relationship spanning approximately **1.5 years**, contributing to continued development across multiple project phases.
- Independently handled complete project development, including application logic, UI, asset integration, online services, monetization, and production builds where required.

PROJECTS

SOGL Engine | C++, OpenGL, Assimp, GLFW, GLM, GLEW | **GitHub**

- Built a custom 3D rendering engine with scene rendering, model loading, lighting, and custom shader systems.
- Implemented PBR, SSAO, image-based lighting, shadow mapping, bloom, and FXAA, developing low-level graphics and GPU/CPU programming experience.

C4-Online | Java, JavaScript, MySQL, WebSockets | **GitHub**

- Designed a server-authoritative multiplayer Connect 4 application with matchmaking, ranking, authentication, persistent sessions, and real-time gameplay.
- Implemented turn validation, reconnection, session recovery, and timeout/abandonment handling in a custom backend.

2D Physics Engine | C++, CMake, SFML | **GitHub**

- Built a Verlet-based rigid-body physics engine with custom simulation, collision detection, and response systems.
- Implemented collision handling using SAT and developed the engine as an independent systems-programming project.

ASCII Renderer | C, Software Rasterization | **GitHub**

- Built a dependency-free CPU 3D renderer that projects and rasterizes 3D geometry into ASCII characters directly in the terminal.
- Implemented core rendering operations independently, providing hands-on experience with 3D mathematics and graphics pipelines.

TECHNICAL SKILLS

Languages: C++, C, Java, Python, C#, JavaScript, GDScript

Software & Tools: Git/GitHub, Linux, OpenGL, Godot, Blender, CMake, MySQL

Areas: Systems Programming, Graphics Programming, Networking, Backend Development, Game/Interactive Software, Procedural Generation
